CAREER SUMMARY

Junior Software Engineer skilled in Python (Flask) and JavaScript, with experience building scalable full-stack applications. Proficient in API development, database design, and secure user authentication. Adept at delivering responsive, user-focused interfaces and collaborating in agile environments to solve real-world problems.

TECH SKILLS

Programming Languages: Python, JavaScript, PHP, HTML, CSS

Frameworks & Libraries: Flask, React.js, Bootstrap, SQLAlchemy

Tools & Platforms: Git, Postman, Supabase, Render, HostAfrica

Databases: PostgreSQL, SQLite, MongoDB, MySQL

Authentication: JWT, OAuth

Additional Skills: RESTful APIs, AI-automation, UX/UI Design (Figma), SEO, Agile (Scrum)

WORK EXPERIENCE

Full-Stack Developer

Evolve Payroll & HR – Remote

[Github](#) | [Live site](#) | [Colaboration](#)

Oct 2025 – Jan 2026

- **Collaborated on the design and development of a cloud-based Payroll & HR SaaS platform** tailored for Kenyan SMEs (5–500 employees), focusing on compliance, scalability, and usability.
- **Designed and implemented core employee management features**, including employee profiles, document storage, organizational structures, and role-based access control (HR, Manager, Employee).
- **Developed payroll processing logic** supporting Kenyan statutory deductions (PAYE, NSSF, SHIF, Housing Levy), allowances, bonuses, overtime, and salary advances with automated repayment scheduling.

- Built salary advance request and approval workflows, integrating advances directly into payroll deductions and payslip generation.
 - Implemented attendance and leave management systems, including clock-in/out tracking, leave balance calculations, approval workflows, and absence reporting.
 - **Integrated M-Pesa and bank transfer workflows** for salary disbursement, payment tracking, and reconciliation.
 - **Developed secure RESTful APIs using Laravel and built responsive HR dashboards using React.js** for payroll processing, compliance monitoring, and reporting.
 - **Contributed to mobile-first employee and manager self-service functionality (Flutter)**, enabling payslip access, leave applications, attendance tracking, and approvals.
 - Implemented audit trails, payroll run logs, and compliance reports to support Employment Act and Kenyan Data Protection Act requirements.
 - **Maintained project documentation**, technical specifications, and source control using GitHub, collaborating in a multi-developer environment and delivering features on an accelerated sprint timeline.
-

Freelance Full-Stack Developer

BRS Holding – Remote

May 2025 – June 2025

- Collaborated with a startup client to fork and customize an open-source AI app ([Adorable](#)) into a Claude 3.7-powered content platform inspired by [lovable.dev](#).
- Integrated [OpenRouter](#) API to replace default AI provider, enabling Claude 3.7 content generation.
- Set up **Stack Auth (Supabase)** for user authentication and registration, including secure token handling and session management.
- Designed a usage-based credit system: 5 free AI credits/day and enforced feature locking upon exhaustion, prompting plan upgrades.
- Integrated **Stripe** for 3-tier subscription model (Free, Pro, Team) and configured usage-based billing logic.
- Implemented a dynamic credit tracker and prompt system in the UI to drive user upgrades and improve monetization UX.

- Deployed and configured the app on a **BitLaunch Ubuntu server (24.04 LTS)**, handling environment variables, deployment security, and production readiness.
 - Maintained and documented development via a private GitHub fork ([brs-holding/ai-app](#)), contributing code, fixes, and production features.
-

Freelance Web Developer

Feb 2025 - Present

Built and optimized a portfolio website for a client to professionally present their creative work and attract new opportunities.

- Delivered a fully responsive site using HTML, vanilla JS, and CSS with attention to brand identity.
 - Executed on-page SEO strategies and connected the site to Google Search Console and Analytics.
 - Ensured fast load times and accessibility compliance to enhance user experience and search rankings.
-

Moringa School Projects

Full-Stack Developer (Intern)

June 2024 – December 2024

- Delivered dynamic full-stack applications using Flask for backend and React for frontend.
 - Spearheaded API integrations and database schema optimization, enhancing app responsiveness by 25%.
 - Collaborated with diverse teams, improving project delivery timelines by 30%.
 - Conducted code reviews, increasing code quality and team efficiency.
 - Developed user-centric web apps with a focus on intuitive interfaces and seamless functionality.
-

TECH PROJECTS

Full-Stack Developer

Quick Demo | Live Site | [Github](#) | [Colaboration](#)

SME Management SaaS (Stock, Sales & Credit Tracking) – Independent Project
2026 – Present

- **Designed and developed a mobile-first, multi-tenant SaaS platform** to provide real-time financial visibility for underserved SMEs, targeting owner-managed businesses in secondary towns with high stock turnover and manual record-keeping.
- **Translated real SME pain points into a tightly scoped MVP** focused on three core outcomes: daily sales visibility, real-time stock tracking, and customer debt monitoring.
- Built a lightweight backend using Flask and SQLAlchemy, implementing JWT-based authentication, organization-scoped data access, and secure role separation between business owners and staff.
- Designed and implemented core modules including sales recording (cash, M-Pesa, credit), automatic stock deductions, low-stock alerts, customer debtor tracking, and staff sales attribution.
- **Developed a mobile-first** React frontend optimized for speed and simplicity, featuring fast sale entry for staff and clear, summary-level reporting for business owners.
- Implemented a multi-tenant data model where all entities (users, products, sales, customers) are scoped by organization, **enabling a single codebase to safely serve multiple businesses.**
- Delivered simple, high-value reporting (today/week/month sales, profit estimates, sales by staff), prioritizing clarity over complex analytics to drive daily usage.
- Defined strict MVP scope boundaries to prevent feature creep, deliberately excluding accounting, payroll, tax logic, and advanced permissions to maximize adoption and usability.
- Planned and executed a phased rollout strategy, including pilot deployments with SMEs, rapid feedback loops, and iterative UX improvements based on real operational usage.

Real-estate AI voice agent

[Quick Demo](#) | [GitHub](#)

Built an AI-powered voice agent integrating **Deepgram (STT)** and **Twilio WebSocket streams**, designed for **real estate-specific functionality**.

- Developed a **WebSocket server** (`main.py`) handling real-time audio input/output between Twilio and Deepgram.
 - Implemented **speech-to-text transcription** using Deepgram with a configurable `config.realestate.json`.
 - Designed a **function call system** via `real_estate_functions.py`, enabling property search and other domain-specific actions.
 - Secured environment configuration with **.env file** for API keys and **.gitignore** best practices.
 - Exposed local server using **ngrok** for Twilio integration, ensuring real-time accessibility.
 - Documented full setup in **README**, including prerequisites, troubleshooting, and developer onboarding.
-

Dashwise

[Quick Demo](#) | [GitHub](#)

Built a full-stack business dashboard tailored for small service-based business owners such as salonists, tutors, and consultants.

- **Developed secure user authentication** using JWT for login, signup, and session management.
- **Implemented CRUD features** for appointment tracking, revenue monitoring, and customer CRM, streamlining daily operations.
- Designed a **smart dashboard** summarizing today's appointments, income performance, and top customers for actionable business insights.
- **Integrated Supabase (PostgreSQL)** for scalable data storage and retrieval of appointments, customers, and income data.
- **Exported business reports** in PDF/CSV format using Flask-WeasyPrint, allowing easy sharing with investors or for accounting.
- Employed agile methodology: planned and executed in 3 sprints covering backend, core features, and dashboard/report exports.

- Focused on **mobile-first responsive UI**, ensuring accessibility for users with minimal technical experience.
 - Hosted the platform on **Render** with CI/CD pipeline setup.
-

Client Portfolio Website

[GitHub](#) | [Live site](#)

JavaScript | HTML/CSS | SEO

Developed a responsive portfolio website for a creative professional to showcase their work and services.

- Implemented **SEO** best practices, including meta tags, structured data (Person schema), and sitemap.xml for improved search engine visibility.
 - Integrated Google Search Console for site monitoring and indexing; submitted sitemap and used URL inspection for enhanced discoverability.
 - Focused on clean UI design and mobile responsiveness to ensure optimal user experience across devices.
 - Provided client training on using analytics tools to track performance.
-

Hospital Management Application

Quick Demo | [GitHub](#) | [Live site](#) | [figma Prototype](#)

- Built a **comprehensive hospital dashboard** using **Flask (backend)** and **React.js (frontend)** to streamline patient, billing, appointment, and inventory operations.
- Implemented **JWT-based authentication** with role-based access control for **admins, doctors, and staff**.
- Integrated **PostgreSQL (via Supabase)** for robust and scalable data management.
- Developed **real-time billing and revenue analytics**, including monthly revenue line charts, and dashboards showing metrics such as patient count, appointments, and doctor availability.
- Enabled **secure lab result tracking**, medical records management, and automated invoice generation.
- Hosted on **Render**, using npm run build for React static asset deployment and served via Flask routes.

Graceful Impressions

Quick Demo | [GitHub](#) | [Live site](#) | [figma Prototype](#)

- Developed a full-stack digital platform aimed at connecting Kenyan art painters with global art enthusiasts. The project streamlines the business side of art creation, allowing artists to focus entirely on their craft while boosting visibility and increasing potential sales.
- **Frontend Development:** Used **React** to build a responsive, user-friendly interface for artists and users, ensuring a seamless browsing experience across devices.
- **Backend Development:** Developed the backend with **Flask** and **Python**, implementing APIs to handle user registration, artist profiles, art uploads, and event management.
- **Database Integration:** Leveraged **PostgreSQL** on **Supabase** to manage user data, artist profiles, and artwork storage, ensuring smooth scalability.
- **User Authentication:** Implemented secure user sign-up and login functionality, allowing artists to manage their profiles and art pieces and enabling users to register for more information.
- **Deployment:** Hosted the frontend and backend using **Render**, ensuring smooth deployment and integration.
- **UI/UX Design:** Utilized **Bootstrap** to design an aesthetically pleasing and accessible user interface, ensuring that users and artists have an intuitive experience.

E-commerce Store

Quick Demo | [GitHub](#) | [Live Site](#)

- Developed a full-stack e-commerce platform using **React** for the frontend and **Node.js/Express** for the backend.
- Integrated **MongoDB** for database management and hosted product images on **Cloudinary** for efficient delivery.
- Implemented user authentication and authorization to secure routes and provide tailored user experiences.
- Added **Stripe** for seamless payment processing, enhancing user convenience and trust.

- Built an admin dashboard featuring tools to:
 - Add products to the store.
 - View site analytics, including sales data, user numbers, and products sold.
 - Feature products for promotional purposes.
 - Designed and optimized APIs to handle cart functionality, user management, and product operations.
 - Focused on a responsive and intuitive UI, ensuring a smooth shopping experience for users.
-

EduLearn Education Platform

Quick Demo | [GitHub](#) | [Live Site](#)

- Developed a full-stack educational platform using React for the frontend and Flask with PostgreSQL for the backend.
 - Designed a secure user authentication system with JWT, ensuring safe login sessions and user-specific data.
 - Built backend routes to manage user accounts, course listings, and reviews, enabling seamless user interaction with the platform.
 - Integrated PostgreSQL for data storage, allowing efficient management of user data, courses, and reviews.
 - Developed a dynamic and responsive UI with React.js and Bootstrap, optimizing for both desktop and mobile experiences.
 - Thoroughly tested backend functionality using Postman, ensuring smooth integration and API reliability.
 - Focused on creating an intuitive interface that simplifies course browsing, emphasizing user engagement and ease of use.
-

EDUCATION

Moringa School

Full Stack Software Engineering Program

June 2024 – December 2024

ACHIEVEMENTS & IMPACT

- **Enhanced Team Efficiency:** Improved project delivery times by optimizing workflows and leading peer feedback sessions.
- **Optimized Application Responsiveness:** Achieved a 25% improvement through advanced API integrations and database optimizations.
- **Delivered Client Solutions:** Successfully developed and deployed multiple full-stack applications tailored to client needs.
